Description of Data

1. Introduction :

The YouTube Trending Video Dataset (**Updated daily**) includes the different trending videos in different countries. Each country has its own table, and each country table includes tuples of different videos. The description of each video includes the unique video ID from YouTube, the title of the video, when the video was published, the channel ID of the publisher, the channel title of the publisher, and so on.

2. Source: [Kaggle Dataset](#)

3. Table description (schema): The name of the table is abbreviated

a. [Country]_youtube_trending_data

I. Abbreviations

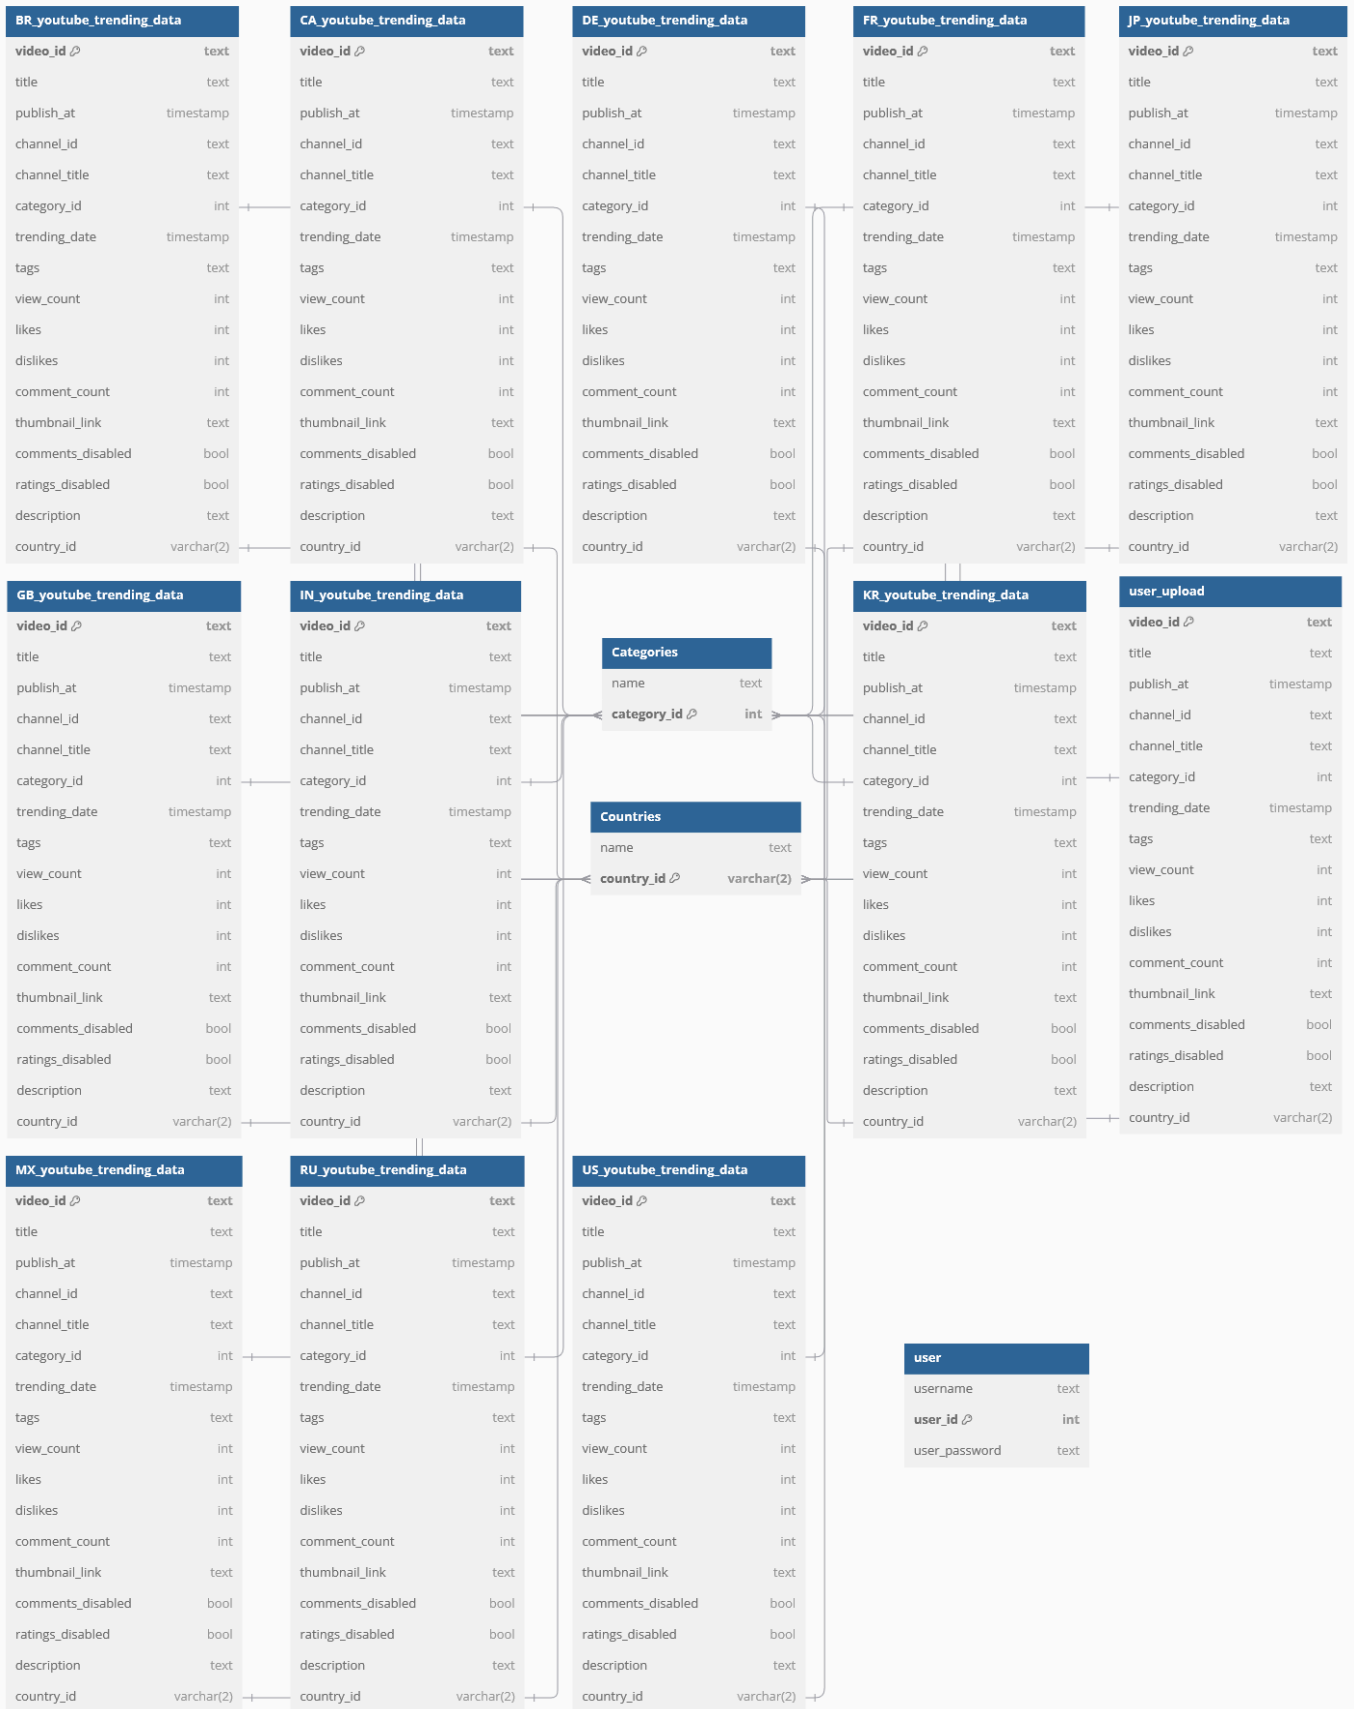

BR	Brazil	CA	Canada	DE	Germany
FR	France	GB	Great Britain	IN	Indian
JP	Japan	KR	Korea	MX	Mexico
RU	Russia	US	United States		

II. Column explanation:

- i. video_id: [primary key] unique identity for each video
- ii. title: title of the video
- iii. published_at: at which date the video was published
- iv. channel_id: the unique identity of the channel that posted the video
- v. channel_title: the title of the channel posted the video
- vi. category_id: [foreign key] category of the video

- vii. trending_date: the date that the video is on the trending list
 - viii. tags: tags of the video
 - ix. view_count: view_count of the video
 - x. likes: likes of the video
- b. Countries
 - I. name
 - II. [primary key] country_id
- c. Categories
 - I. name
 - II. [primary key] category_id
- d. user
 - I. Username
 - II. user_id
 - III. [primary key] user_password

Schema below:

Application (website)

1. Main Idea

In modern society, YouTube is one of the most popular worldwide platforms where streamers can upload videos and viewers can enjoy different kinds of content. Without a doubt, due to the large quantity of videos, every creator tries their best to provide attractive content and a lot of videos go viral every day. Therefore, we want to analyze the type or category of videos that are currently trending to predict the trends in different regions and provide a website for YouTube lovers to search for information. In addition, users can also update the information about the videos they love on the website.

2. Target

We target the average YouTube enjoyer like you and I, who spend much of our free time watching videos. We hope that the website can help viewers find more interesting videos to watch and broaden their horizons. On the other hand, our website also provides a platform for YouTube channel analytics to visualize how trending videos rise and fall in different areas of the world.

4. Functionality (CRUD)

- a. Create: Create new video listings, including video links and categories. Users can also add new video categories or add new country categories.
- b. Read: Users can see what the current trending videos are under each category or country.
- c. Update: Users can update video links or categories to fit video themes better, or replace videos that might be removed.
- d. Delete: Users can delete video listings when videos have been deleted from YouTube.

5. Exception handling

- a. Invalid video ID: Search YouTube to check if the video is available online, if not, the user will not be able to upload the video listing.
- b. If a user updates a video that is not currently trending: we provide a new table or category to include the new video listing.

6. Interface

Work plan

1. Time schedule
 - a. 第10周~第12周
 - i. 完成基本SQL操作
 - ii. 完成database基本結構（挑選出來需要的column）
 - b. 第12周~第14周
 - i. 設計及修改使用者可能會用到的query
 - c. 第14周後
 - i. 完成展示用的網頁跟debug
2. Discussion
 - a. [HackMD](#)
3. Repo
 - a. [GITHUB](#)
